How to use the Unscreen Pro Bundle?

Selecting "Pro Bundle" as output format enables you to import your videos directly into the professional video editing software of your choice. Once you have selected "Pro Bundle" you will automatically download 2 files:

alpha.mp4

the alpha matte which contains a white foreground and a black background

color.mp4

the main video with colour correction already applied to it.

You can easily combine these two files in your video editing software and then apply a final transparent layer to your video. *See all instructions below.*

Adobe Premiere Pro

Instructions

Adobe After Effects

Instructions

DaVinci Resolve

Instructions

VSDC

Instructions

Final Cut Pro*

Instructions

Apple iMovie*

Instructions

* Please note that if you're using Final Cut Pro or Apple iMovie, whenever you are processing videos with Unscreen, you need to select Green Screen as background color, instead of Transparent Background. You should then export your video in an mp4 format, and not as Pro Bundle.

No editing software?

No worries. With Unscreen you can add new backgrounds by either selecting one from our existing collection, or by uploading your own. You also have 30 days to reprocess your videos.
